Niraj KV

Lead ETL Developer at Geisinger
Danville, Pennsylvania, United States

Summary

I am an accomplished professional with over 18 years of experience in the data warehouse domain. My expertise lies in business intelligence and analytics programs, account management, project management, business analysis, resource management, and business development across various global project implementations and industries.

My career path has led me to spend around 10 years working in the clinical and insurance domain at Geisinger Medical System, where I supervised a staff of about 20 people at Geisinger Health Plan. In this role, I closely collaborated with important business stakeholders to meet data-related demands and estimate development budgets.

Throughout my career, I have honed my skills in a range of technical areas. I have an excellent hand on the EPIC-Clarity/FACETS system, and I am proficient in various DW ETL tools, including Informatica 7.1.1/8.1/8.6/9.0, 10.5, Informatica (IDR), Informatica IDQ, and IICS. I have experience with data (ETL), DWH using dimensional schemas, data warehousing design techniques, (EDW), (ODS), Data Marts, Data Lake, using multidimensional and dimensional modeling concepts. Additionally, I am experienced and understanding of Hive SQL, Netezza, Oracle DBMS.

Formulate, construct, and uphold DBT models dedicated to data transformation, guaranteeing precision and efficacy.
Engage in collaborative efforts with data engineers and analysts to comprehend data necessities and provide scalable resolutions.

Exhibit adeptness in Snowflake operations, encompassing data loading, transformations, and fine-tuning for optimal performance. Enhance system efficiency by optimizing queries and leveraging Snowflake features to bolster overall performance.

In addition to my technical expertise, I am skilled in big data technologies such as Hadoop, HDFS, Hive, and Sqoop, and have experience in data modeling tools like Erwin and Microsoft Visio. I am also proficient in BI tools such as Tableau and BO, and I have experience working with operating systems like UNIX, Linux, and Windows. Additionally, I have hands-on experience with Github, Jira, and Azure DevOps.

I am passionate about leveraging my skills and expertise to solve complex problems and drive success for businesses. Overall, my wealth of experience and technical skills make me an invaluable asset to any organization in need of a seasoned data warehouse/business intelligence professional. I look forward to the opportunity to apply my skills to contribute to the growth and success of any organization

Thank you for taking the time to review my profile.

Experience

Geisinger

12 years 9 months

Application Developer Team Lead

August 2021 - Present (4 years 6 months)

Danville, Pennsylvania, United States

As an Application Developer Team Lead (GHPIT Manager), you are responsible for leading and managing large-scale IT programs and projects, overseeing project managers, and coordinating with business stakeholders to ensure the successful delivery of IT solutions that align with organizational

Actively working on the GHP Data Engineering platform to ensure data is accurately processed, stored and analyzed for various business needs.

Supervising a team of approximately 20 individuals to ensure their work is aligned with the company's goals and objectives.

Leading the ETL Group by providing technical direction and ETL design. Collaborate with business stakeholders to define program requirements,

scope, timelines, and budgets, ensuring program deliverables meet or exceed expectations.

Working closely with the Change Management Team to flow the SDLC process smoothly and ensure that all changes are properly documented and tested.

Collaborating on major projects such as Medicaid Expansion, CHIP, CMS Interop and Informatica PowerCenter to IICS Migration and DBT Model Development.

Using DBT I created SEEDS/Snapshot and Model jobs. Use varies other features Like Macros/Deployment YML/DBT jobs.

Using DBT Macros create reusable component and using across the Data Pipeline.

Oversee and manage a team of project managers, providing guidance and direction on program management.

Monitor program progress, identify and mitigate risks, and make timely decisions to keep programs on track.

Ensure effective communication and collaboration across program teams, stakeholders, and executives to achieve program goals and objectives.

Develop and maintain strong relationships with vendors, partners, and other external stakeholders to ensure program success.

Ensure compliance with relevant laws, regulations, policies, and standards, such as cybersecurity, data privacy, and IT governance.

Drive continuous improvement and innovation in program management processes, tools.

Lead ETL Developer

October 2019 - August 2021 (1 year 11 months)

Danville, Pennsylvania, United States

Spearheaded the design and development of enterprise and regulatory reporting analytics for COVID-19

Optimized development time across analytics departments by designing and developing Geisinger's enterprise data model to integrate clinical, billing, and claims data

Led data provider and designed data flow workflows for the Cardiovascular Accident Machine Learning Project

Designed and developed Care Gap workflows using Smart Data Element and contributed to the Stroke/CV event risk preventive program

Conducted patient chart reviews with Pharmacy team to identify care gaps and provided treatment for high-risk patients

Demonstrated extensive experience with Hadoop tools like Sqoop, Hive, Spark SQL, and HBase to load data into HDFS and created data structures for user access

Developed complex queries to prepare data for key performance indicators and identified EPIC-Clarity data elements

Created a complete pipeline to inbound and outbound data for LGI/Pre2D and Flu high-risk patients for the Medical Early Sign (ML Project)

Pulled data from RIS and EPIC systems for Radiology Turnaround based on Order/Preliminary/Complete/Final events

Managed Upgrade Projects for various source systems

Extracted data from EPIC Cadence system and fed it to OBERD (Outcomes Based Electronic Research Database) application via Rhapsody interface engine

Demonstrated expertise in the Hadoop ecosystem and wrote queries in Hive to build ETL pipelines for specific business use cases

Tuned poorly performing Hive and SQL queries

ETL Developer Senior
May 2013 - October 2019 (6 years 6 months)
Danville PA

Designed and developed a custom data ingestion pipeline to efficiently load 100+ clinical and health plan data sources across various zones in HDFS, resulting in a 50% reduction in nightly load times.

Led a project team in the successful and seamless migration of EPIC Clarity to a new platform to ensure uninterrupted data flow and system availability.

Worked on the migration of CDIS data warehouse from Informatica/Teradata to Hadoop to improve scalability and performance.

Responsible for designing and developing ETL processes to extract, transform, and load data from various source systems into the data warehouse for reporting and analytics purposes.

Designed and developed Cerner Inbound/Outbound data feed, processing 100 GB of data daily.

Conducted various performance tuning activities on the database and ETL process to optimize system performance and improve data quality.

Configured, tuned and implemented ETL tools such as Informatica PowerCenter for seamless integration with various source applications.

iGATE

Project Manager & Business Intelligence Architect at iGATE

August 2012 - May 2013 (10 months)

New York

Project: EDW Workday Project

Location: New York, USA

Client: Time Warner

Project Description

As an IT Project Manager, you are responsible for leading and managing large-scale IT programs and projects, overseeing project managers, and coordinating with business stakeholders to ensure the successful delivery of IT solutions that align with organizational

Role and Responsibility

Designed and developed a custom data model for EDW Workday projects based on understanding existing business model and customer requirements.

Provided high- and low-level design and created functional specification documents for ETL processes.

Estimated project timelines based on ETL specifications and requirements. Worked on the Workday PeopleSoft Integration Project for Time Warner in New York, USA, which involved

implementing a new application to feed data from the EDW Workday System to the PeopleSoft system.

Designed and developed ETL processes to integrate data across 45 tables related to payroll, position, full and part-time employees, addresses, emergency contact information, etc.

BirlaSoft Inc USA

System Analyst - Senior ETL Lead

December 2010 - August 2012 (1 year 9 months)

Norwalk, Connecticut Area

Project: CFS Simplification

Location: Norwalk, USA

Client: GE Commercial Finance

Project Description:

The CFS Simplification project involved the implementation of a new application for GE Commercial Finance. The project involved pulling data from the EDW Core database and pushing it into the SAM system. The SAM system was responsible for evaluating the data feed and providing ratings for customers.

The project required the population of over 900 attributes, including 100+ amount fields such as Exposure, Funding, and Loan. The successful implementation of this project resulted in a streamlined process for customer ratings and improved efficiency in the finance operations of GE Commercial Finance.

Role and Responsibility:

Designed and developed the ETL process for the CFS Simplification project.

Analyzed and understood the legacy system and built an efficient ETL process using Informatica and Teradata Bteq.

Collaborated with both onsite and offshore teams for successful project delivery.

Conducted project estimation based on the ETL specifications and requirements, and defined the timeline accordingly.

NIIT Technologies Limited

Technical Consultant

March 2008 - December 2010 (2 years 10 months)

Project: ING Banking/CSI

Location: Philadelphia USA

Client: ING Bank and

Project Description

Participated in Assurant reporting project for requirement analysis and development.

Role and Responsibility

Collaborated with stakeholders and users to understand business needs and deliver customized solutions.

Designed and developed logical and physical models for efficient reporting.

Involved in ETL activities for ING Banking - EIM, providing development and production support.

Developed Informatica ETL process for efficient data loading into the DB2 enterprise data warehouse system.

Capgemini Consulting

Senior Consultant

March 2007 - March 2008 (1 year 1 month)

Project: Nor'Easter

Location: Bangalore India

Client: FairPoint Communications

Project Description :-

Nor'Easter was a telecommunication project in the Bangalore, India location. The project was focused on providing a tool to communicate program objectives, scope, structure, and responsibilities to all groups and individuals involved with the program. FairPoint Communications, Inc was acquiring and operating all LEC assets from Verizon in New England, including Vermont, New Hampshire, and Maine. Verizon had decided to completely exit the LEC business in these three states, including the Consumer, Small Business, Large Business, and Wholesale segments.

Role and Responsibility

Worked on Nor'Easter - FairPoint Communication Migration Project in the Telecommunication Domain.

Participated in the migration of data from Verizon's LEC assets to FairPoint Communication, including various source systems.

Utilized Informatica PowerCenter, Oracle, and Unix technologies extensively in the project.

Handled various heterogenic source systems, including RDMS, FlatFile, XML, and Cobol systems, to bring them into the new systems.

iGATE Global Solutions

Senior Software Engineer

February 2005 - March 2007 (2 years 2 months)

Project: GE Healthcare Project

Location: Bangalore India

Client: GE Healthcare

Project Description

Involved in various GE Healthcare project initiatives.

Role and Responsibility

Worked on the GL-Analyzer (FADB Retirement) Release Project, where we transformed PL/SQL code into Informatica-Bteq Hybrid Technologies.

Contributed to the integration of the Central Data Warehouse (CDW), Scope, and CMS source systems into the Enterprise Data Warehouse (EDW) following GE Healthcare's acquisition of Bio Science Health System. Used Informatica-Bteq Hybrid technologies in this project.

Provided production support for the GEHC BI Migration project. Responsible for QA and production migrations, as well as the execution of loads for BI-related objects (Informatica, Cronacle, and DPA) for the GE Healthcare BI Division.
